

CS-SERIES CHOPSAWS

The Go Fast CS-Series Chopsaw will add to any operation with its sturdy construction, quick cycle time, and simplicity. Its chopping action keeps material in place for accurate cuts. When it comes to end cutting this is the machine. Go Fast offers two models to choose from!

WELDED STEEL STRUCTURE:

These chopsaws come with more than just a roller bed. The CS-Series chopsaws are built with tubular framing to provide additional support along the roller bed. After years of use, the structure of your chopsaw will remain solid.

MANUAL OR AIR POWERED:

A calculated counter weight ensures that the required force to pull the blade down is minimal. If you want to speed up your production even more, we can easily add an air option to pull the blade up and down for you.
